# ACCOUNTANCY

THE GEORGE WASHINGTON UNIVERSITY  
SCHOOL OF  
BUSINESS

## DEGREE OVERVIEW

Accounting is the management of financial information. Accountants design and implement systems that capture relevant information from the transactions in which an organization engages, analyze it, and communicate it to others. The accountant answers questions such as: "How profitable is this business?"; "How solvent?"; "How risky?"

## CAREER CHOICES IN ACCOUNTANCY

Every organization with financial records needs accountants and students with a Bachelor of Accountancy who wish to begin working immediately upon graduation, pursue careers in public or corporate accounting, or with the government. Public accountants audit financial statements and also provide tax planning and financial advisory services to their clients. Some accountants who work for corporations are responsible for preparing and maintaining the financial records of the business; others use accounting and other information to help evaluate potential and existing products and projects in order to aid in managerial decision making. Governmental accountants prepare and help administer the budgets under which their agencies operate.

An undergraduate degree in accounting is also an excellent foundation for graduate study in business, finance, or law.
