The Master of Science in Project Management (MSPM) is designed to provide students with specialized skills in the project management domain. The program offers an innovative curriculum that combines principles of project management with a solid foundation in business administration.

One-fifth of the world’s business activity is organized as a project, with an annual value of US$12,000,000,000,000 according to Project Management Institute Report in 2013. The Economist Intelligence Unit survey (2008) showed that Ninety-seven percent (97%) of skills needed for successful business careers fall within the scope of project management. The MSPM program will prepare students with the knowledge, diverse proficiencies, and skill sets required to succeed in a project environment of any business (government, consulting, contracting, NGO, etc.), offering a competitive edge in current or future employment.

*Note: MSPM Courses that are 3 credits are 14 weeks long, while courses that are 1.5 credits are 7 weeks long, offered in either the first or second half of a semester. All MSPM courses are taught in the evenings. Students have the flexibility to complete all courses on campus, online or hybrid.*

**Admissions Requirements**

Students interested in the combined MSPM degree program must meet the same standard for admission to the MSPM program as Master’s students. Contact the GWSB graduate admissions office for program-specific admissions criteria.
